NLP Project Proposal

This week, you will be officially teaming up with another student and submitting a project proposal. If you are in need of a partner, please let me know and I will try to pair people up. If you have your team set, please fill out the survey so I know who will be working with whom.

Once your team is formed, you will put together a short, one page proposal for your project. It will include:
- A description of the system you intend to build
- The purpose of the system (what you intend to do with it)
- The type of source training and testing material you intend to gather
- A "vision statement" describing what a successful implementation of your system would look like, including an explanation of input format and and example of correct output

For this assignment, everyone will submit a proposal. Once the teams are in place, only one submission per item will be necessary.
